

Position on the AAPM Statement in Opposition to the White House Executive Order on Visas and Immigration

The American Association of Physicists in Medicine, in collaboration with American universities and other scientific and engineering organizations, has released a [statement in opposition to the White House Executive Order on visas and immigration](#). The organizations are concerned that the Executive Order limits the ability of scientists and engineers in industry and academia to enter, or leave from and return to, the United States, and that the Executive Order will reduce U.S. science and engineering output.

The Canadian Organization of Medical Physicists supports the position of the AAPM on this matter, and has communicated its support to the AAPM Board.
